Introduction and Motivation

Tourism plays a significant role in the growth and development towards the Los Angeles economy. It doesn't only promotes the city as showcase to the world, but also raises support for creating employment opportunities for local businesses. (lacity, n.d).

According to Road Genius, “In 2025, Los Angeles welcomed 49.5 million visitors, about 1% fewer than in 2024, with international visitation down 3% to 6.4 million”

As millions of tourists visit Los Angeles each year, it is important to understand the reported crime occurring across the city. This could provide useful information for identifying crime patterns and supporting tourism route planning.

Problem Scenario

I was assigned by a tourist company to undergo an analysis of the crime activities occurring over Los Angeles, as they would like to monitor safety concerns and adjust their routes throughout the city. As in the recent years, crime has declined since 2023 and they would like to identify which locations and areas would be a lot safer for new visitors.

Aim and Objectives

Aim - To analyse reported crime dataset across Los Angeles and provide insights that can be beneficial to plan out routes for a tourist company.

Objectives -

Identify the most common crimes reported in Los Angeles.

1.

Examine how crime varies by time, including month, day, and time of day.

2.

Analyse victim demographics across crimes reported

3.

Determine which areas experience the highest number of reported crimes

4.

Status of the crime when it was committed

5.

Weapons reported used during the crime

6.

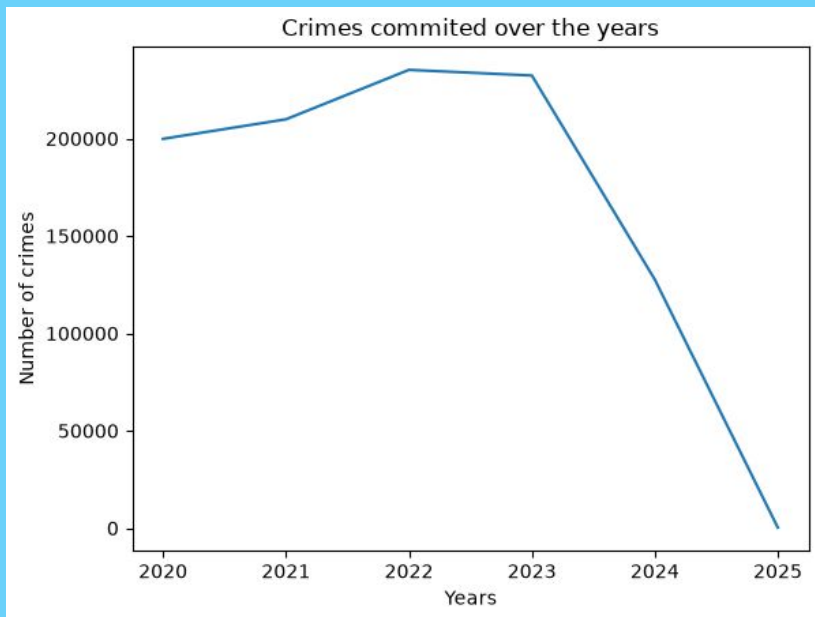

Investigate where and when fewer crimes are most frequently reported

7.

Deeper Analysis

8.

Analysis

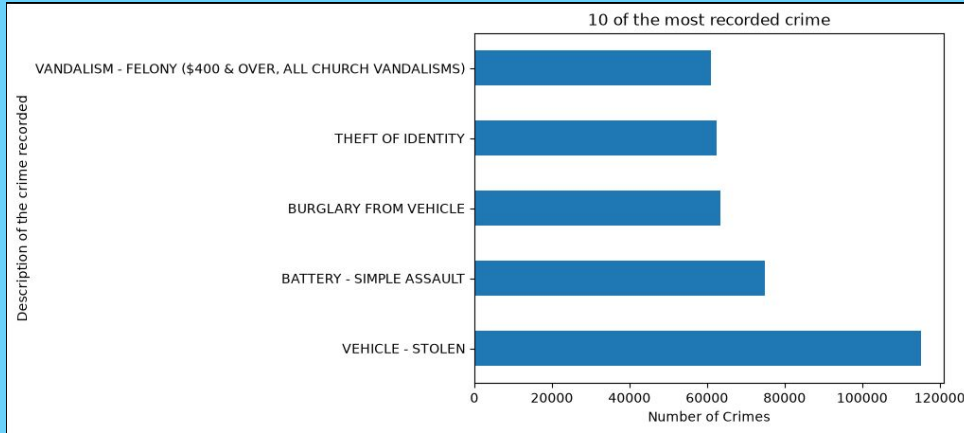

Crime Trends - Yearly Patterns

The data shows an increase in reported crime from **2020 to 2022**, reaching its highest point in **2022**. The slight decline in 2023 indicates a small reduction in the number of reported crimes. However, there was a drastic decrease in **2024** compared to the previous years. The number of reported crimes in **2025** was considerably lower, but this is because the dataset does not contain a full year of data for **2025**.

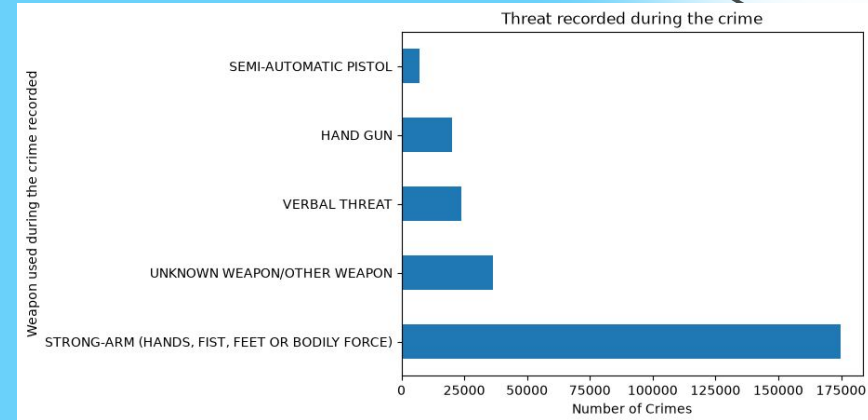

Analysis

Crime Type - Category Patterns

This graph shows the number of reported crime cases for each category, with **Vehicle - Stolen** being the most common reported crime, while **Vandalism** has the fewest reported cases.

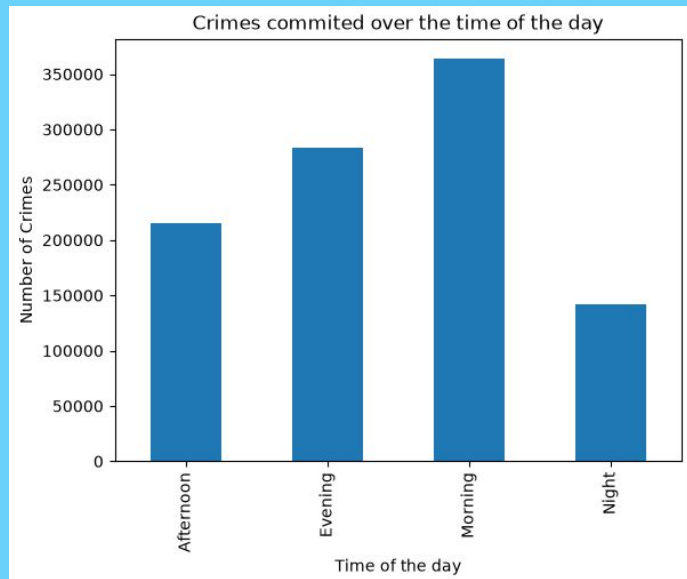

Crime Type - Weapons Patterns

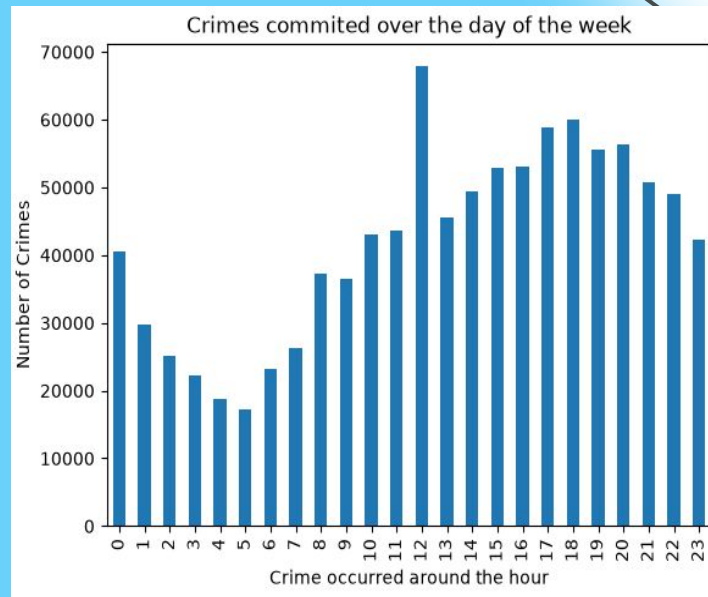

This graph shows the number of reported crime cases for each weapon used, with **Strong-Arm** being the most commonly reported weapon, while **Semi-Automatic pistol** has the fewest reported cases.

Analysis

When Does Crime Occur? - Daily Patterns

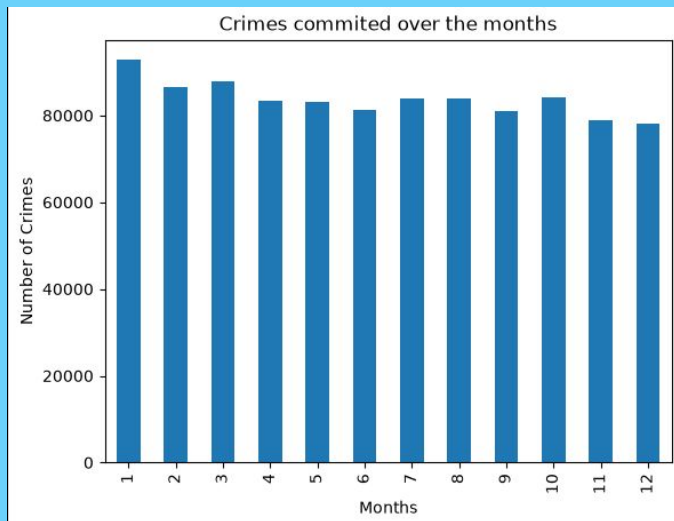

This graph shows the number of reported crimes by time of day, highlighting that **Night** has the fewest reported crimes, while **Morning** has the most.

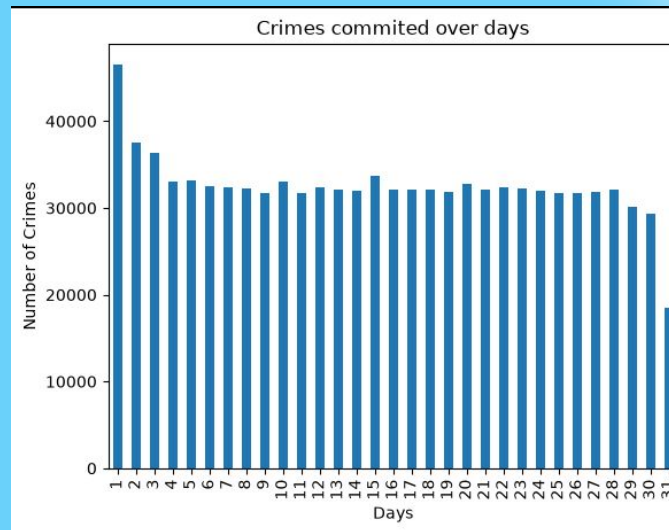

This graph shows the number of reported crimes by hour of the day, highlighting fewer reported crimes after **1 AM**, with an increase in reported crimes after **11 AM**.

Analysis

When Does Crime Occur? - Calendar Patterns

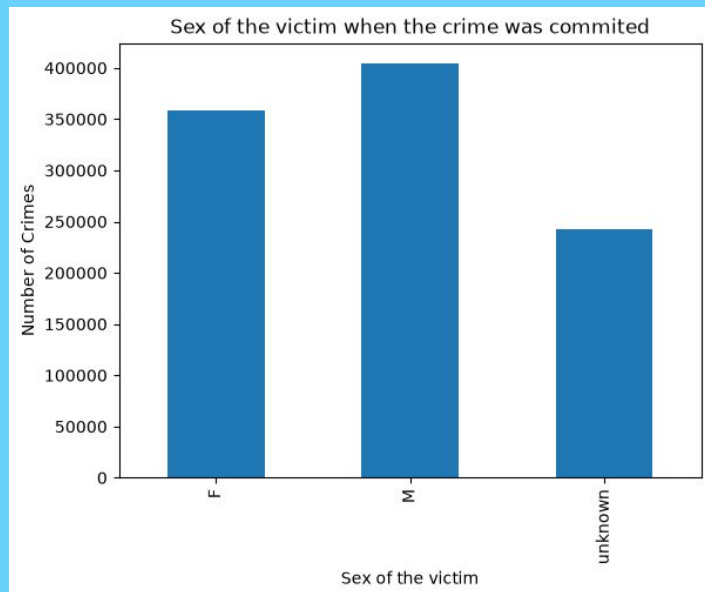

This graph shows the number of reported crimes by month, highlighting that **December** has the fewest reported crimes, while **January** has the most.

This graph shows the number of reported crimes by day of the month, highlighting that the **31st** has the fewest reported crimes, while the **1st** has the most.

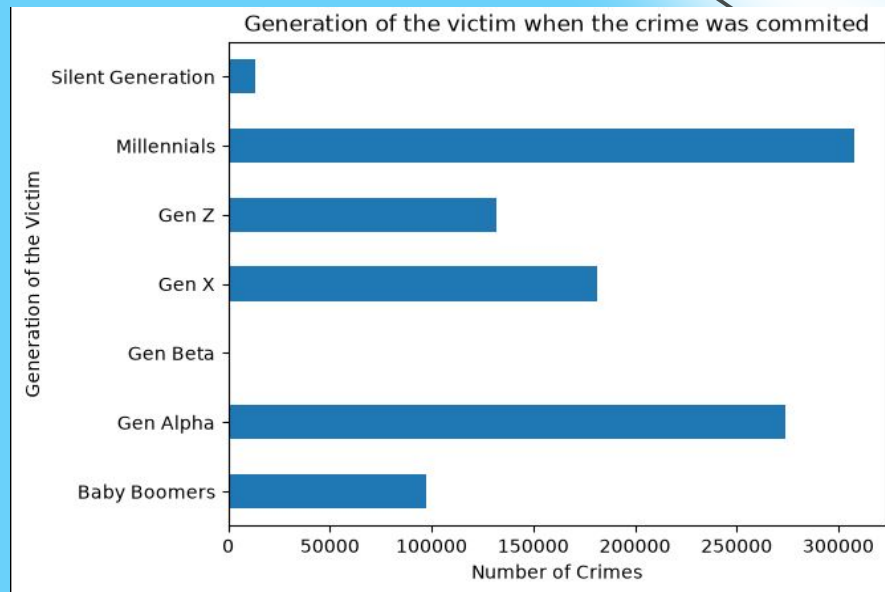

Analysis

Victim Sex - Demographic Patterns

This graph shows the number of reported crime cases by crime type and victim sex. **Males** represent the most victims compared to **Females**, while the remaining lowest is **Unknown**.

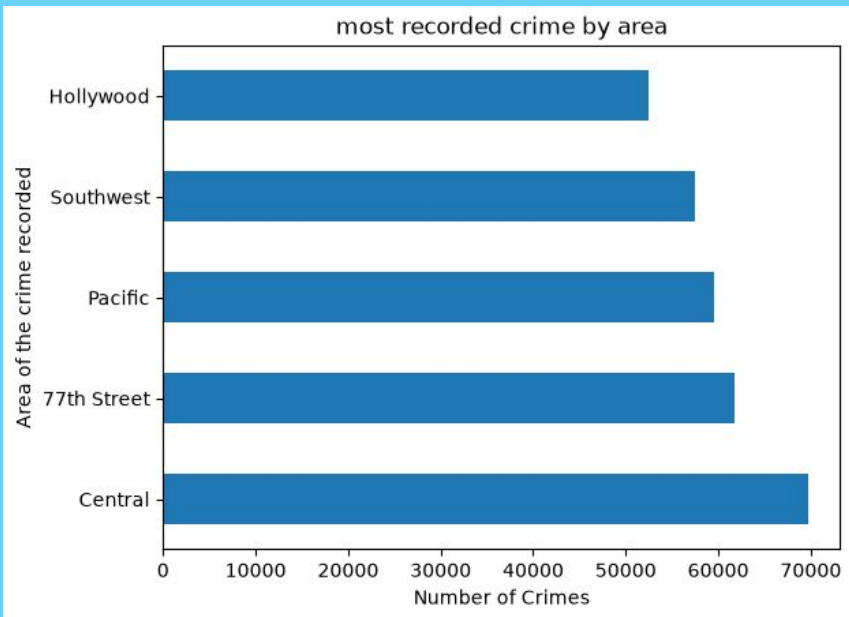

Victim Age Generation - Demographic Patterns

This graph shows the number of reported crime cases by crime type and victim age generation. It demonstrates that **Millennials** are the most represented victims, while the **Silent Generation** has the fewest reported cases.

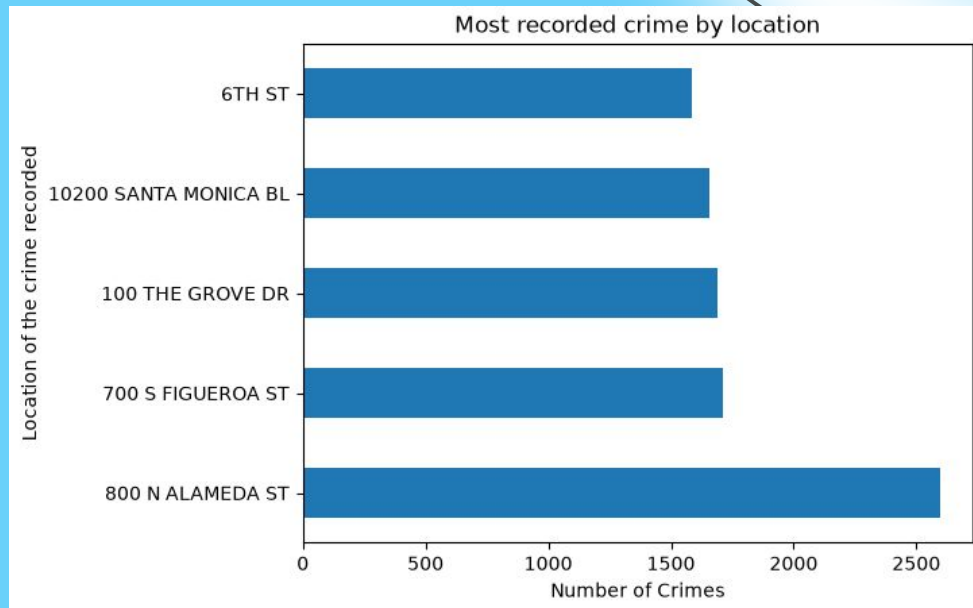

Analysis

Where Does Crime Occur? - Area Patterns

This graph shows the number of reported crime cases by Area, **Central** represented the most reported crimes compared to **Hollywood**.

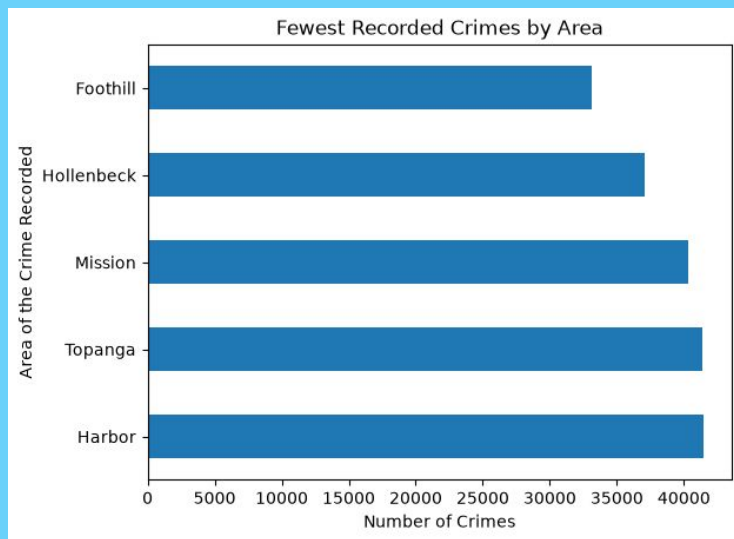

Where Does Crime Occur? - Location Patterns

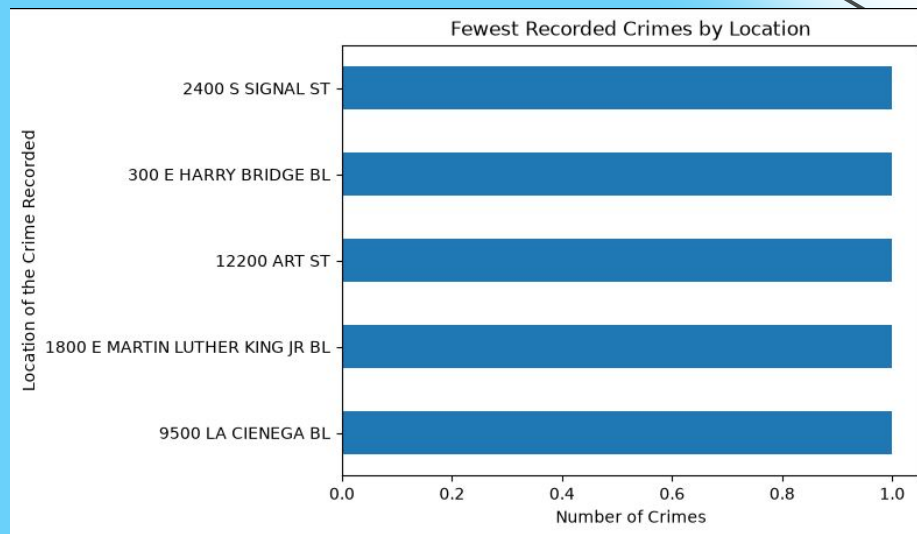

This graph shows the number of reported crime cases by Location, **800 N Alameda ST** representing the most reported crimes compared to **6TH ST**.

Analysis

Where Are Reported Crime Levels Lower?

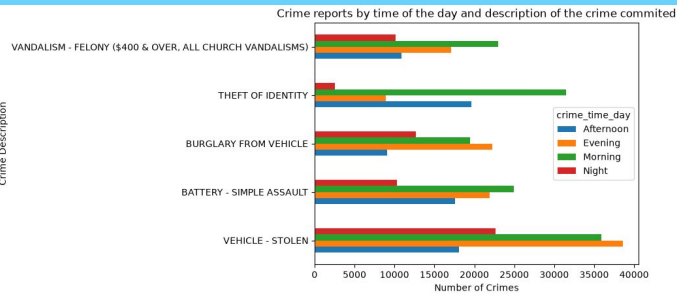

This graph shows the number of reported crime cases by Area, **Foothill** representing the most few reported crimes.

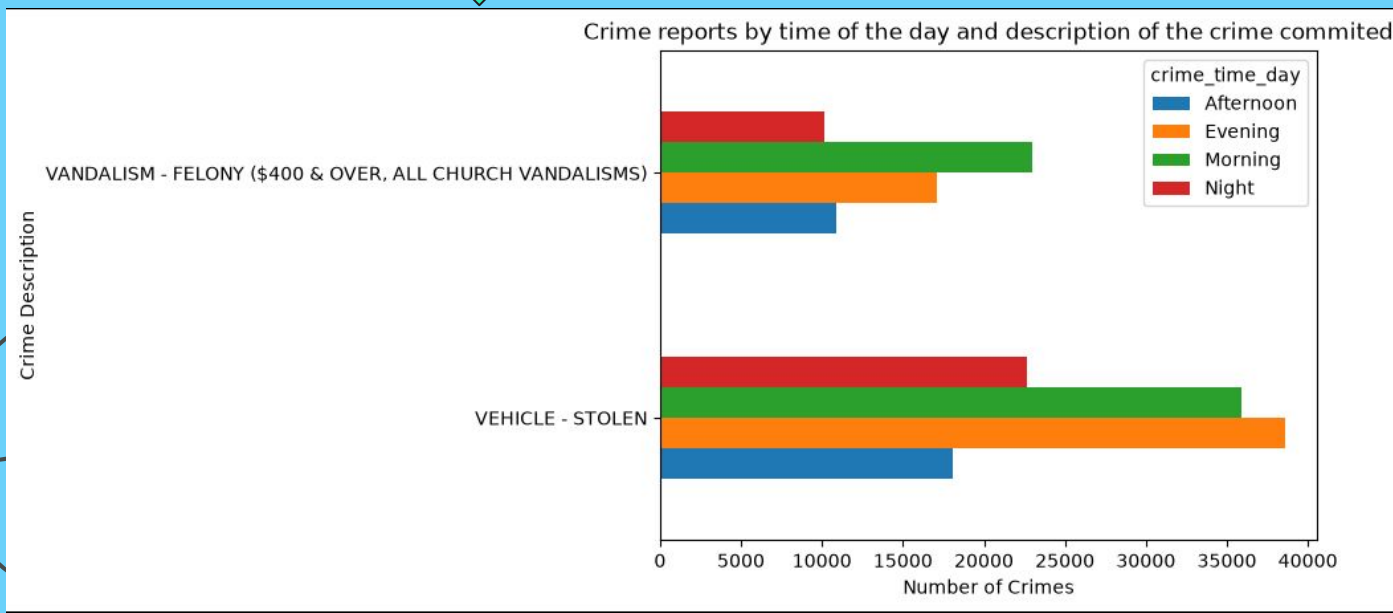

This graph shows the number of reported crime cases by Location, **all of them** representing the most few reported crimes.

Deep Analysis

This graph compares the number of reported crimes across different times of the day and shows which crime types are most frequently reported during each period.

The most common crime reported across all times of the day is **Vehicle - Stolen**, while **Vandalism** has the fewest reported cases

Recommendations

- Review datasets

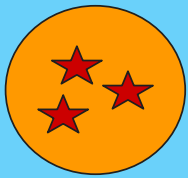

As the dataset does not contain a full year of data for **2025** or **2026**, I recommend validating these findings as an updated data will help on planning on better decisions.

- Area and Location -

Consider areas and locations such as **Foothill** and **2400 S Signal St**, as they had some of the lowest reported crime levels in the dataset.

- Time of the day

Based on the dataset, **Night** had the fewest reported crimes. This could be considered when planning the timing of tourist activities and routes.

Thank you!!
